

TECHNICAL SPECIFICATIONS

Product technical indicators	Details
Dimensions	3.3x3.2x13.5 cm / 1.3x1.3x5.3''
Tank capacity	15 ml
Battery	Lithium polymer battery / Capacity: 400MAH
Body material	Food-grade PC
Electrolysis time	2 minutes
Number of electrolysis at full charge	Around 20 times
Charging time	1-2 hours
Hydrogen content	1000 PPB
Charging indication	Red breathing light
Full power indication	Steady blue light
Power shortage indication	Steady red light
Standard	CE Certification
Model	CHW01

Warranty: this product is neither a toy nor a medical device. Neo Factory - Climsom cannot guarantee the consequences of the use of the Serum H2J. Neo Factory - Climsom guarantees the original purchaser of the product against any manufacturing defect in the product for 2 years from the date of purchase. The guarantee will only result in the replacement of the defective product to the exclusion of any other repair.

HYDROGEN WATER SPRAYER USER GUIDE

H2J Serum comes in a 15ml spray bottle. Within two minutes of activation, the water is hydrogenated, i.e. enriched with active antioxidant hydrogen (H2). A real elixir of youth for your skin to use as a daily care before your skin care cream or to relieve inflamed skin at any time of the day.

PRINCIPLE

Serum H2J is a hydrogenated water generator with a PEM membrane that not only increases hydrogen production but also isolates ozone and chlorine from the hydrogenated water, which remains pure. Before each use, the Serum H2J must be activated. This activation enriches water hydrogen molecules by electrolysis. The water becomes strongly antioxidant. As the hydrogen molecules are tiny, they easily penetrate the skin. Thus, hydrogenated water will play a role in protecting the skin against free radicals caused by our external and internal environment (pollution, sun, fatigue, stress...).

Hydrogenated water prevents and delays the signs of skin ageing.

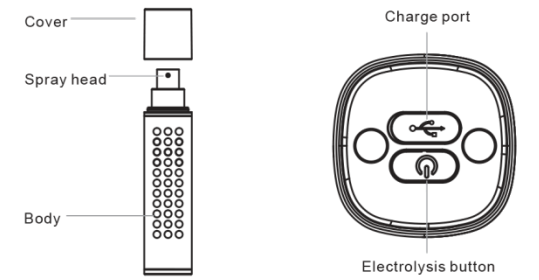

USE

Before the first use:
 Before the first use, or after a long period of non-use, it is necessary to "wake up" the PEM membrane.
 ➤ Fill the tank with water either demineralized or distilled or with a low mineral content and leave for 8 hours, then rinse the tank.
 Not to do so leads to lower hydrogen production efficiency.

For each use:
 ➤ Add water to your Serum H2J. Use preferably distilled, osmosed, unscented demineralized or very low mineral water to preserve the membrane.
 ➤ Press the on/off button under the bottle to activate the hydrogenation of the water which lasts for 2 minutes (during which the blue, purple and red lights appear).
 ➤ The water, enriched with hydrogen, is ready to use once the lights switch off.
 ➤ Once the water has been hydrogenated, it shall be used within 30 minutes to retain its properties. You can then apply the water to your whole face (or the area to be treated) by pressing the spray.

Several possible uses:

- Use daily as an anti-oxidant serum before a skin care cream on a cleansed skin.
- Use occasionally to relieve skin inflammation (e.g. sunburn, eczema or acne) or to refresh (practical format).

How to charge the Serum H2J?

- If the red light comes on, your Serum H2J needs to be recharged.
- Plug it in with the USB cable provided (or a 5V adapter not provided).
- While charging, the red light of the Serum H2J will light up.
It is possible to activate and use it while charging.
- Once the device is recharged (after about 2 hours), the blue light will come on.

When and how to clean the Serum H2J?

Clean when needed, about every 30 uses.

The more you use pure water and protect your spray from dust and other impurities, the less cleaning will be necessary.

- Fill the tank halfway with white vinegar
- Let it work for a few minutes
- Shake vigorously about ten times
- Rinse several times

CAUTIONS

The water put into the tank must not exceed 60°C (140°F) otherwise it will cause hydrogen to escape and may damage the appliance.

Be sure to use cold or lukewarm water.

Once activated, the hydrogenated water shall be used within 30 minutes to maintain its properties.

If necessary, repeat the activation.

NEVER put any liquid other than WATER in the tank to avoid the risk of clogging and do not use gaseous liquid to avoid the risk of explosion.

Keep away from heat sources.

Do not immerse the product in water (although there is no problem if water spills out of the tank when filling).

Never open the device or the battery.

Generally, hydrogenated water will protect your skin from external aggressions (sun, pollution...), internal aggressions (stress, fatigue...), and inflammation.

In fact, hydrogenated water acts as an anti-oxidant and neutralizes the free radicals responsible for premature ageing of the skin (wrinkles, loss of elasticity, dull skin, spots, etc.).

Hydrogen molecules have the ability to easily penetrate the skin, to effectively repair damaged cells and to increase their vitality.

- Reduction of wrinkles and fine lines, smoother skin
- Increased skin firmness
- Reduction of pigmentary anomalies
- Increased hydration of the upper layers of the skin: more comfort
- Reduction of acne inflammation
- Better cell regeneration: prevention of premature skin ageing
- Cell protection: anti-oxidant agents neutralize free radicals
- Soothing effect and protection against UV rays. Great relief in case of sunburns.
